

Septic Systems in a Special Flood Hazard Area

Criteria for Installing a Septic System in a Special Flood Hazard Area

Property owners must install and maintain:

- 1 A KDHE approved top lid concrete septic tank, plastic septic tank or an aerobic treatment tank. All tanks must have approved/accepted anchoring, due to additional weight from potential flood waters.
- 2 Adequate anchoring to keep the tank secure in the event of saturated soils in floodwater.
- 3 Follow any other criteria assigned by the local floodplain manager.
- 4 Do not cover the Septic system without an inspection by the Reno County Public Works Environmental Division Staff. To contact, call 620-259-2105.
